| PROJECT STUDY |

We started our process by defining and evaluating all requirements and expectations for the project. In this way, we guarantee the correct understanding of our customer's order.

We carry out an analysis of the target audience and existing technical possibilities: available materials or processes, using appropriate tools and methodologies

01

| PRODUCT DESIGN |

We present sketches, 3D images or exploratory prototypes in order to define the problems and solutions to be applied.

Once the idea is selected, we proceed to the definition of the components, materials and processes involved and the realization of the 3D model for manufacturing.

02

| PROTOTYPING |

At this stage, where the 3D model is already defined, we made some prototypes to test its functionality.

03

| RELEASE |

Given the diversity of FAPRO GROUP's areas of intervention, we help our cliente find the right supplier and follow up on the first samples.

The monitoring of the first samples will be essential for the definition of the final adjustments that will guarantee the product's useful life.
